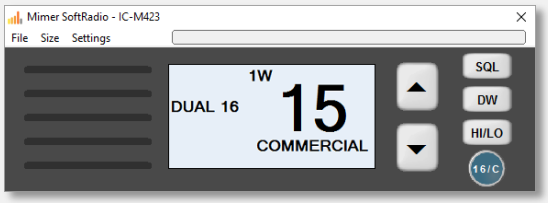
Mimer SoftRadio

Connecting radios all over the world

Marine Radio with VoIP audio
Remote control your Icom IC-M423/M424



Virtual Control Head of IC-M423

Works with both M423 and M400BB

Mimer SoftRadio is a system to remote control two way radios over LAN, WAN or the Internet. The operator uses a standard Windows PC and standard audio accessories.

Each operator can handle many radios and each radio can be remote controlled by many operators.

The remote control option for the Marine Radio Icom IC-M423/M424 includes not only audio and PTT functions but also channel change, squelch setting, dual watch, power high/low and quick select of CH16.

The system allows for mixing of radio types at the same operator, so that also other analogue radios or digital radios as DMR or Tetra can be controlled. Also phones and intercoms can be operated from the same PC.

Optionally all audio can be recorded and calls can be cross patched between radio systems.
